

El Paso is REDI for you.

If you're an engineer
interested in building
your career, El Paso's
Rotation, Development,
Exposure, and Interaction
(REDI) program
is right for you.

The interstate natural gas transmission business is engineering-intensive. And engineering professionals in core disciplines are critical members of Team El Paso.

That's why we offer our Rotation, Exposure, Development, and Interaction (REDI) engineer development program. As an entry-level engineer in our Pipeline Group, REDI will provide you with a comprehensive look at our business and a unique opportunity to make a meaningful impact on our performance.

Rotation. As a REDI participant, you'll rotate through three host departments, with each rotation lasting three to six months. Our Engineering groups in Birmingham, Colorado Springs, and Houston, as well as our Operation Services group serve as host departments.

Exposure. During each rotation, you'll be given a variety of meaningful daily assignments as well as short-term assignments with your host department or in other departments. You'll have an opportunity to explore work with departments from field operations to planning.

Development. You'll stretch your capabilities through real-world assignments, and make an impact as part of one of our high-performing pipeline teams. And you'll enhance your technical skills and develop new skills to help accelerate your career.

Interaction. You'll be assigned a sponsor—a director or manager within a host department who takes accountability for your development, serves as your home base during rotation assignments, and acts as a career coach, helping place you in a permanent assignment at the end of your REDI rotation.

At El Paso Corporation, we're ready for you. Become an integral part of the team that operates the nation's largest interstate natural gas pipeline system. Explore the REDI program today. Call Rob Ferguson at 713-420-2828.
